# ACI Shopify Extension Installation and Configuration
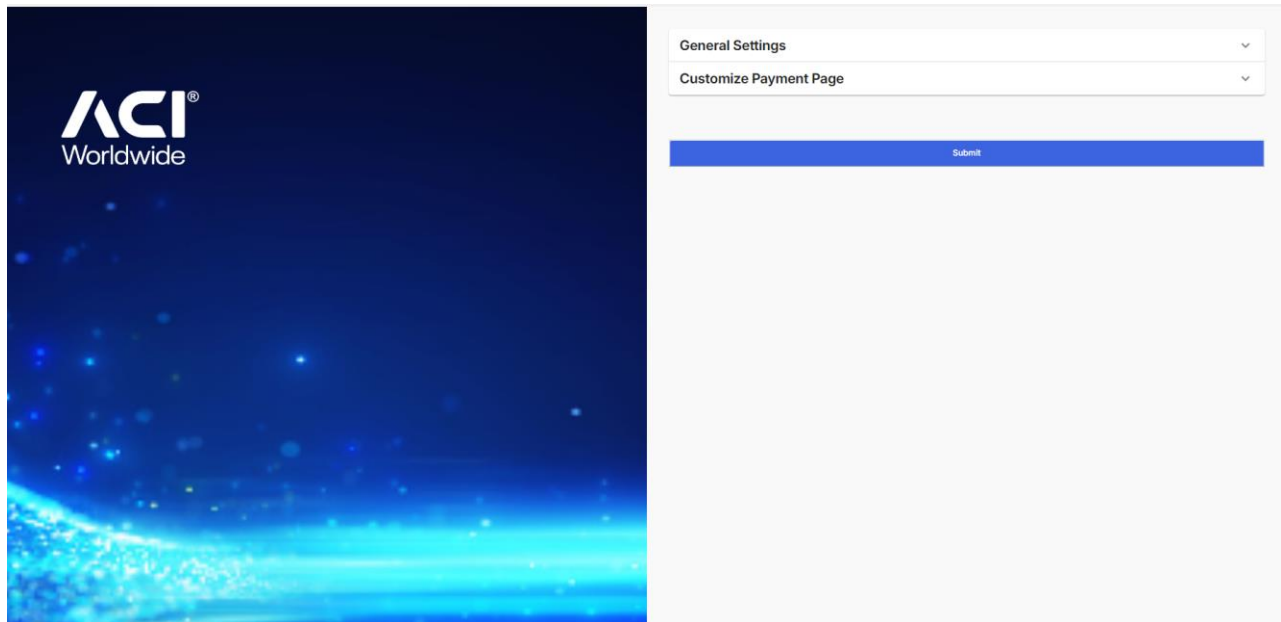

Overview

Welcome to the ACI Payment Shopify Plugin documentation. This guide provides comprehensive instructions for installing and configuring the ACI Payment plugin on your Shopify store. The ACI Payment plugin enables seamless and secure payment processing, ensuring a smooth checkout experience for your customers.
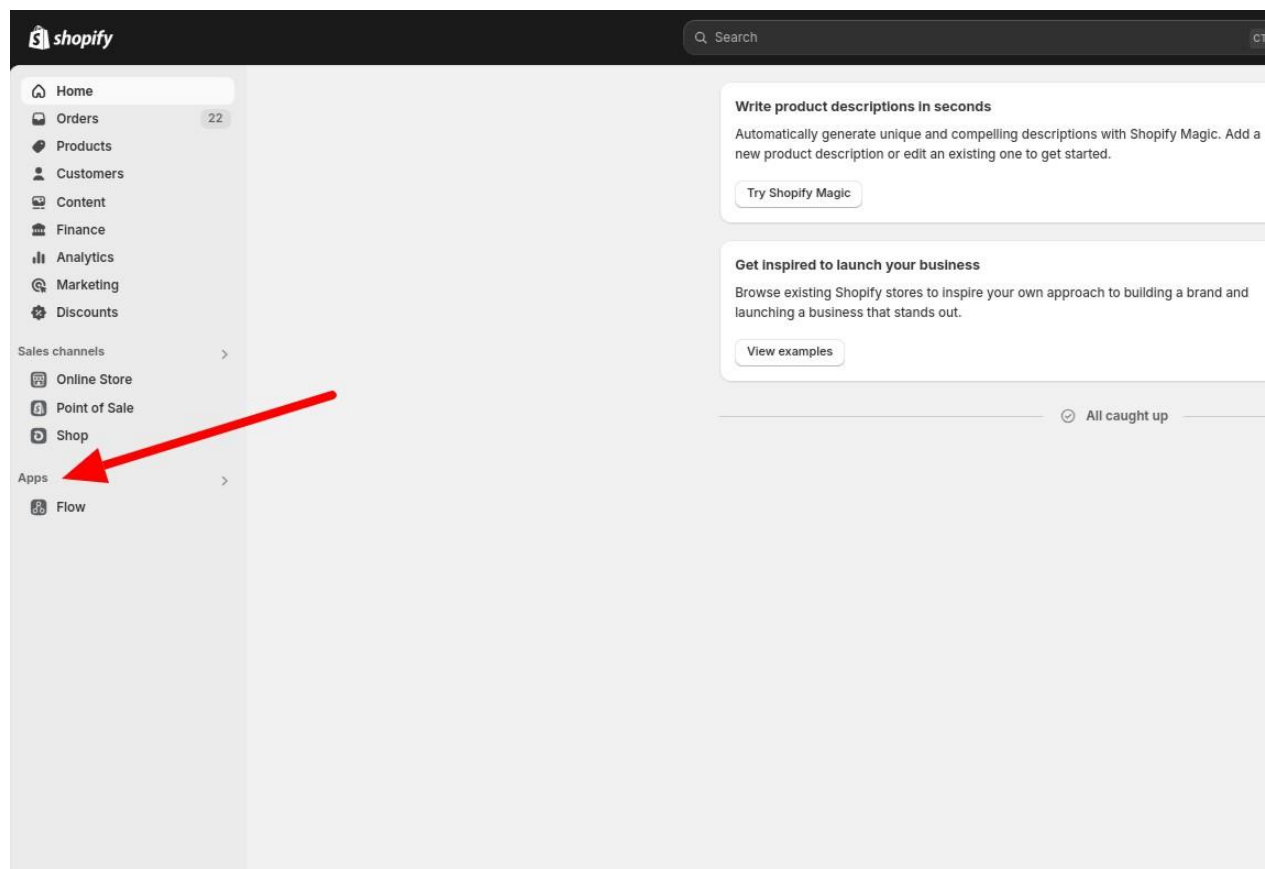

App Installation

1. Get the Installation Link
   - First, obtain the app installation link from your project team or account manager.

2. Install the App
   - Click on the installation link provided.
   - You will be redirected to the Shopify admin page where the app installation screen will be displayed.
   - Click the Install button to proceed with the installation.

3. Access the App:
   - After installation, you will be redirected to the app dashboard.

- o You can also access the app through the Apps tab on the left-side navigation of the Shopify admin.
- o Click the app name to access the App Dashboard.

App Dashboard – Fields

The App Dashboard contains several input fields for configuration. Below is a list of the available fields:

General Settings

- Entity ID (Test): Entity ID of your Channel or Merchant from BIP Portal
- API Key (Test): Access token of your Channel or Merchant from BIP Portal
- Test Mode: INTERNAL/EXTERNAL - This field is only applicable if the Environment is 'Test'. External mode will redirect the APM methods to their dedicated sites. For example, if the customer selects 'Klarna,' the payment will be processed on Klarna's site.
- Entity ID (Live): Entity ID of your Channel or Merchant from BIP Portal (Production)
- API Key (Live): Access token of your Channel or Merchant from BIP Portal (Production)
- Webhook URL: Read only webhook URL. Use this URL to configure webhook in BIP Portal.
- Webhook Decryption Key: When completing webhook setup in ACI BIP Portal, you will get this key.
- Merchant Name: Name of the Merchant on payment Page

App Configuration

- Complete Configuration: Fill in all the necessary fields mentioned above.

- Submit Settings:
  - After completing the fields, click the Submit button at the bottom of the page.
  - A success message, "Settings updated," will appear at the top of the dashboard upon successful submission.

- Return to Shopify:
  - A Return to Shopify button will appear. Click it to return to the Payments settings in the Shopify admin.

- Test Mode:
  - Enable test mode to simulate test transactions.

- Activate the ACI Payment Method:
  - Click the Activate button at the bottom of the page to enable the ACI payment method.
  - Once enabled, the ACI payment option will appear on the Shopify checkout page.

ACI BIP Configuration

To configure the payment brands displayed on your payment page, you need to ensure the appropriate merchant account setup by selecting the respective brands applicable in the ACI BIP portal. Additionally, there are specific configurations required at ACI to enable Shopify plugin processing.

For these configurations, please contact your support team or account manager to ensure everything is properly set up. This will ensure that your payment page presents the correct options to your customers, providing a seamless and efficient checkout experience.
